How to Pass the Claude Certified Architect Exam in 2 Days (Just Copy My Blueprint)

tutorial | Clickbait: Medium | 100% of facts correct

Paid promotion: Maven, Amazon Associates, DataCamp +1

Summary

The Claude Certified Architect Foundations exam is a 120-minute test of 60 scenario-based questions across five domains, weighted toward agentic systems and Claude Code. The video's sample questions show sound architectural reasoning, but its two-day, roughly 20-hour study plan and its practice-exam advice are not backed by the sources checked. Individuals also reportedly cannot register unless they work for a Claude Partner company.

Title check: Not fully. The video gives a study plan of roughly 20 hours of content spread over two days, but passing is not guaranteed by it, and the host admits the real exam is harder than the practice test. (answer at 06:15)

Exam structure and domains 00:16

The Foundations exam has 60 scenario-based questions in 120 minutes, about two minutes per question. It covers five domains: agentic architecture and orchestration, Claude Code configuration and workflows, prompt engineering and structured outputs, tool design and MCP integration, and context management and reliability. Only four of six possible scenario types appear on any given test, and the sources do not confirm the video's split of roughly 15 questions each. Individual registration reportedly is not open; viewers say you must be employed by a company that is a Claude Partner.

Three sample architecture questions 02:35

Context staleness in a long coding session is best fixed by regrounding: periodically reloading current file state rather than trusting conversation history, since a larger context window only delays the problem. Malformed JSON from invoice extraction is best handled by enforcing a schema at the output layer with validation and automatic retry, not by prompt wording or a bigger model. Concurrent sub-agent writes to a shared document are fixed by giving each agent isolated output sections and merging them in one sequenced step. The pattern across all three is that architectural fixes beat added instructions or brute force.

The two-day study plan 06:13

The video proposes about 10 hours on day one: Anthropic's Claude Code in Action, Introduction to Agent Skills, Building with the Claude API, and Introduction to MCP. MCP is already included in the Building with the Claude API course, so the quiz should not be doubled. The 20-hour total is not confirmed: the Building with the Claude API course alone lists about 9 hours of lessons, so the two blocks may double-count content. Viewers note the plan assumes you already use Claude regularly and have deep agent experience, and one reports about two weeks of preparation was needed to pass.

Practice exams and readiness target 07:02

The practice resources named in the video are third-party products such as CertSafari and a community study guide, not an official Anthropic practice exam. No source sets a 90 percent readiness threshold or confirms that the real exam is harder than practice tests. Free official material is available through Anthropic's Skilljar platform, and the Foundations study materials are the official resource to start with. Treat the 90 percent target as the video's own suggestion rather than a benchmark.

Fact check

Time	Claim	Verdict	Sources
01:54	The Claude Certified Architect exam is 120 minutes long with 60 questions, which is 2 minutes per question.	Correct	whizlabs.com claudecertifiedarchitects.com linkedin.com
06:15	The two-day study plan takes roughly 10 hours on day one and roughly 10 hours on day two, for about 20 hours total.	Unverified	academy.claude.com coursera.org vantagepoint.io
07:15	Retake the official practice exam until consistently scoring above 90 percent, which the host says is a good readiness target even though the real exam runs harder.	Unverified	anthropic.skilljar.com certsafari.com
